No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Microbiol. 32:813-823(1999).

CATALYTIC ACTIVITY: ATP + H(2)O = ADP + phosphate.
SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to the cation transport ATPases
ATPases). Subfamily v.
                                                                                                                                                                                                                                                                                                                                  Transmembrane;

                                            Res. 8:123-140(2001).

CAMPALYTIC ACTIVITY: N-acetyl-L-glutamate 5-sen

CAMPALYTIC ACTIVITY: N-acetyl-L-glutamyl phosphate +

+ phosphate = N-acetyl-5-glutamyl phosphate +

PARHWAY: Arginine biosynthesis; third step.

SUBCELLULAR LOCATION: Cytoplasmic (Probable).

SIMILARITY: Belongs to the NAGSA dehydrogenase
                                                                                                                                                                                                                                                                                                                                                                                                         OR ST0195

"Delta-(L-alpha-aminoadipyl)-L-cysteinyl-D-valine synthetase from Aspergillus nidulans. Molecular characterization of the acvA gene encoding the first enzyme of the penicillin biosynthetic pathway.";

J. Biol. Chem. 266:11264-12654 (1991).

-I- FUNCTION: Bach of the constituent amino acids of the tripeptide acv are activated as aminoacyl-adenylates with peptide bonds formed through the participation of amino acid thiolester intermediates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            01-AUG-1992 (Rel. 23, Created)

Sequence 1, Application US/09336601

Patent No. 6184008

GENERAL INFORMATION:
APPLICANT: OHTA, Hiromichi
APPLICANT: SUGAI, Takeshi
APPLICANT: ISHI, Takeshi
APPLICANT: ISHI, Takeshi
APPLICANT: MITSUDA, Satoshi
TITLE OF INVENTION: PRODUCTION OF OPTICALLY ACTIVE SPHINGOID COMPOUND
FILE REFERENCE: 2185-249p
CURRENT APPLICATION NUMBER: US/09/336,601
CURRENT FILING DATE: 1998-06-21
EARLIER APPLICATION NUMBER: 09/034,007
EARLIER APPLICATION NUMBER: 09/034,007
EARLIER FILING DATE: 1998-03-03
NUMBER OF SEQ ID NOS: 2
GOFFMADE: DESCRIPTION SECUENCE SERVINGS SERVINGS SECUENCE SERVINGS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score
